## FIRESCOPE RADIO COMMUNICATIONS GUIDELINES

FIRESCOPE Radio Communications Guidelines are derived from the Cooperative Agreements for Use of Radio Frequencies between fire service agencies of California allowing for mutual use of radio channels during mutual aid efforts. VHF high band is the default radio frequency band utilized by the California fire service.

Effective January 2024, agencies will be required to provide a mobile and portable radio in all responding units with a channel capacity of at least 400 channels. The mobile radio requirement does not apply to personnel responding in rental or personal vehicles, or those engaged in support functions. It is recommended that responding Overhead personnel have at minimum a 400-channel capable portable radio with recommended channel load and/or ability to be cloned at incident.

All channels in the FIRESCOPE STATEWIDE VHF channel plan are required in at least one Mobile and one Portable VHF radio per responding unit utilized by fire service agencies providing mutual aid in California.

Fire service agencies whose normal dispatch system is on a band other than VHF high band should ensure that their mobile and portable radios and dispatch centers are properly programmed to operate on the UHF, 700 and 800 MHz interoperability channels contained within the FIRESCOPE STATEWIDE CHANNEL PLAN.

Legacy BK GPH/DPH radios are nearing end-of-life. Support and repair at incidents will be limited by parts availability. Cloning will still be available on a limited basis.

## IMPORTANT COMMUNICATIONS ISSUES

### Travel Channel

The **California Emergency Services Radio System (CESRS)** is the only VHF statewide channel authorized for use as a Travel Channel only within the State of California. As a Travel Channel, CESRS must be used in the Direct Mode (no tones) for line-of-sight travel communications. Agencies with a need to contact a State ECC or OES resources during an emergency are authorized to use Repeat Mode.

7DATA69D and 7DATA89D have been approved for nationwide use as travel channels. 7DATA69D is primary for Fire/EMS and 7DATA89D is primary for Law Enforcement. Agencies may add a notation to the end of the channel name identifying the usage as long as the original name precedes the notation (e.g. 7DATA69D TRVL).

Note: CESRS and CESRS D are authorized for use as a travel channel ONLY within the state of California.

## Narrowbanding

ALL VHF and UHF radios **MUST** be both FCC Part 90 and narrowband compliant.

## Federal Frequency Use

All radios utilizing Federal frequencies must be National Telecommunications and Information Administration (NTIA) compliant. Radios are approved for use but may not be supported at incident. (i.e., programming, repair, battery replacement, etc.)

## GUIDELINES

1. While numerous radio channels/talkgroups can be pre-programmed into radios, it is important to note that in order to legally transmit on those channels/talkgroups (including channels listed in the FIRESCOPE STATEWIDE CHANNEL PLAN) the user: 1) must be authorized by the FCC or NTIA to transmit on those frequencies, or 2) must have a radio use agreement or Memorandum of Understanding with the agency which is licensed for the channels, or 3) must be assigned to an incident with that channel/talkgroup listed on the Incident Radio Communications Plan (ICS Form 205).
2. Any agency requesting mutual aid will advise responding agencies of an initial contact channel for the incident. Generally, the initial VHF contact channel will be VFIRE21. Incident Communications Centers (ICC's) and Staging Area Managers should monitor VFIRE21 or another specified initial contact channel to assist resources arriving at the incident. For incidents using 400/700/800 MHz, the initial contact channel should be UCALL40, 7CALL50 or 8CALL90.
3. Local policy will dictate radio channel/talkgroup assignments for an incident until a Communications Unit Leader (COML) establishes the Incident Radio Communications Plan (ICS Form 205).
4. The Incident Commander or, if assigned, the Communications Unit Leader is responsible for managing assigned radio channels/talkgroups and must clear the use of local, state and federal frequencies with the controlling agencies prior to inclusion in an Incident Radio Communications Plan (ICS Form 205).
5. Clear text (plain English) should be used for all communications. CODES SHALL NOT BE USED! Standardized channel/talkgroup names should be stated, e.g. "VFIRE22", or "NIFC Tac 2". Channel/talkgroup numbers corresponding to how a specific radio is programmed should not be used except if published in an IAP (e.g. "Channel 1", or "Channel A14".)
6. When calling another unit/ICS position, the standard is to identify who you are calling first, followed by your call sign (e.g. "Engine 211, Battalion 217" or "Division B, Strike Team 6412C"). Recognize that on large mutual aid incidents, there may be several units with the same radio ID. In those cases, the agency name should also be used (e.g. Oceanside Engine 211, Oceanside Battalion 217").
7. Land Mobile Radio (LMR) data communications [i.e. automated or push button status

tracking for “computer aided dispatch” (CAD) systems] **SHALL NOT** be used outside the local agency’s normal area of operation.

8. Radio programming that enables data signaling (e.g. MDC1200 push-to-talk identification) is prohibited on interoperability channels (e.g. VFIRE22, VFIRE23, etc.).
9. Vehicular repeater systems (mobile extenders) **SHALL NOT** be used outside the local agency’s normal area of operation.
10. The use of gateways (including portable, mobile or fixed) shall be limited to the smallest geographical area of coverage to meet the temporary needs of the incident. Gateways shall only be used on channels/talkgroups that are specifically licensed for that type of operation (e.g. temporary mobile relay) and must be specifically authorized based upon an approved Incident Radio Communications Plan (ICS Form 205) or be recognized as a fixed gateway, included in the California Statewide Communications Interoperability Plan (Cal-SCIP).
11. Family Radio Service (FRS) or any non-narrow band compliant radio, are **PROHIBITED** from use on Federal and State of California incidents. Use of any non-public safety radio (e.g. FRS, GMRS, etc.) or use of a frequency/talkgroup not identified on the Incident Radio Communications Plan (ICS Form 205) is prohibited.
12. The use of any frequency outside the agency’s normal licensed area of operation is prohibited by FCC rules and will likely cause harmful interference to other users (e.g. Strike Teams using a local jurisdiction channel in a distant part of the state). The FCC will enforce this rule.
13. Gateway and interop channel usage shall be coordinated through Cal OES CDO.

**To receive authorization, fill out the online form available at the address below.**

[California Interoperability Frequency Request Form](#)

<https://tinyurl.com/CA-Introp-Req>

**For additional assistance contact the OES Tactical Communications Duty Officer [tdo@caloes.ca.gov](mailto:tdo@caloes.ca.gov) or the California State Warning Center at 1-916-845-8911.**

## FIRESCOPE STATEWIDE CHANNEL PLAN

The FIRESCOPE Statewide Channel Plan was developed to assist California Fire Service agencies in buying and programming synthesized radios to maximize their effectiveness for mutual aid responses.

Regardless of the radio system used on a daily basis, all California Fire Service agencies should maintain an adequate number of VHF mobile and portable radios to support mutual aid operations. In addition to the VHF interoperability channels, UHF, 700 and 800 MHz interoperability channels are also available to support Mutual Aid and All-Risk incidents.

## USAGE NOTES for ICS 217A COMMUNICATIONS RESOURCE WORKSHEETS (SEE COLUMN 4 ON ICS217A WORKSHEETS PAGES 7-28):

1. VFIRE channels are for fire/fire-based EMS inter-agency use. No single-agency/routine communications permitted. Tone 6 (156.7 Hz.) is used as the common tone (transmit and receive). Additional VFIRE operational policies are outlined in California's Office of Emergency Services (OES) Fire Operations Bulletin #28 and the California Statewide Communications Interoperability Plan (Cal-SCIP).
2. Use of CALCord is subject to the CALCord Plan, under an executed CALCord agreement with OES and/or in accordance with the California Statewide Communications Interoperability Plan (Cal-SCIP). Contact OES Telecommunications for information.
3. The listed thirty-two standard tones and thirty-two standard NACs are used by the Fire Service in California for repeater access and/or tone protection in radios. However, if radios can only be programmed with 16 tones, program tones 1 through 16. See Tone/NAC chart on page 33. For radios with 16 tone limitation, it is recommended channels utilizing tones other than tone 1 through 16 are hard programmed with correct tone.
4. Mobile transmitters are to be set to lowest available power setting\* on; VFIRE's, VTAC's, UTAC's, Cal-Fire Tac's, NIFC Command and Tac's and all Air-to-Ground channels, etc.  
\*Lowest available power setting means operations shall be at 10 watts or the lowest power setting above 10 watts available in the radio.
5. Use of the NIFC Command, Tactical and Logistics channels is based upon an approved Incident Radio Communications Plan (ICS Form 205). Communications Unit Leaders **must** obtain authorization for the use of these channels through the NIFC Communications Duty Officer.
6. For use based upon an approved Incident Radio Communications Plan (ICS Form 205). Communications Unit Leaders must obtain authorization for the use of these channels through the Cal-Fire Southern Region/South Operations GACC or Northern Region/North Operations GACC.
7. These channels are for inter-agency/inter-discipline use. No single-agency/routine communications permitted. Tone 6 (156.7 Hz.) is used as the common tone (transmit and receive).
8. **Not available for use** in Imperial, Kern, Los Angeles, Orange, Riverside, San Bernardino, San Diego, San Luis Obispo, Santa Barbara, and Ventura counties.
9. AIRGUARD – 168.625 MHz – A National Interagency Air Guard frequency for government aircraft assigned to incidents. It is used for emergency communications by aviation. A separate receiver is required to permit continuous monitoring in aircraft. Transmitters on

this channel **must** encode a CTCSS of 110.9 Hz. All Incident Radio Communications Plans (ICS Form 205) on incidents that use federal or Cal-Fire aircraft, **SHALL** have AIRGUARD listed as the last channel for all incident related groups/zones and all incident radios shall be programmed accordingly. When radios have limited channel name characters GUARD may be utilized for channel name.

**AIRGUARD is restricted to the following use:**

- a. Air-to-Air emergency contact and coordination.
  - b. Ground-to-Air emergency contact.
  - c. Initial call, recall, and re-direction of aircraft when no other contact frequency is available.
10. The **California Emergency Services Radio System (CESRS)** is the only VHF statewide channel authorized for use as a Travel Channel within the State of California. As a Travel Channel, CESRS must be used in the Direct Mode for line-of-sight travel communications. Agencies with a need to contact a State ECC or OES resources during an emergency are authorized to use Repeat Mode.
  11. Users with radios that are capable of switching between direct and repeat should program the repeat channel (and not two separate channels, a direct channel and a repeat channel).
  12. Users with radios that are NOT capable of switching between direct and repeat should program both the repeater and direct version of each repeated channel and place a "D" in the display to identify the direct version.
  13. Radios **shall** be programmed so as to enable the end-user with the ability to choose from the first 16 (minimum) or all 32 (preferably) CTCSS tones listed in Usage Note #3 [e.g. Channel Guard (CG), Operator Selectable Tone (OST), Multiple Private Line (MPL), etc.].
  14. Cal-OES and the FIRESCOPE Communications Specialist Group are no longer authorized to publish Federal frequencies not identified as National Interoperability channels. These radio frequency assignments are Freedom of Information Act (FOIA) release exempt and are to be protected as Sensitive but Unclassified (SBU) data (Controlled Unclassified Information//Basic). To obtain frequency information for this channel, please contact your OES Region Assistant Chief. For after-hours needs contact the CAL OES State Warning Center (916-845-8911).
  15. Unless otherwise specified by NIFC, utilize tone 7 (167.9 Hz) on transmit and receive.
  16. 7DATA69D and 7DATA89D can be used as travel channels in the direct mode nationwide. 7DATA69D is primary for Fire/EMS and 7DATA89D is primary for Law Enforcement.
  17. UTAC41D – UTAC43D have been approved for use by Cal-OES as in camp logistical support nets. Cal-OES controls the usage of these channels and they must be requested before use.

For the use as a "Camp Net" the user must comply to the following parameters:

- A COML (All-Hazards or NWCG) is present and makes the request through the normal ordering process.
- Portable use only not to exceed 4 watts.
- All radios assigned to the incident are FCC Part 90 compliant.
- COML assigned to the incident is required to inspect the radios and ensure correct programming of the radios.

18. Except for an emergency, aircraft shall **not** transmit over NIFC/NIICD repeaters per chapter 15 of the Interagency Standards for Fire and Fire Aviation Operations (AKA Aviation Red Book).
19. These channels may be licensed for national mobile itinerant mobile use. See NIFOG for further information.
20. US Coast Guard (USCG) channel numbers are currently transitioning. Per the USCG:  

"In accordance with the ITU (International Telecommunications Union), the Coast Guard will start utilizing four-digit channel number designators in communications with the public. As an example, instead of shifting mariners to channel 22A, we will be shifting them to channel 1022."

21. P25 Digital Channels are only Required for Digital Capable Radios.
22. **Utilize standard tones as published in the MACS 441-1, CAL-INFOG, and NIFOG for all State and National Interoperable channels including VFIRE, VTAC, and all UHF/700/800Mhz interoperable channels. Authorize and coordinate these interoperability channels through Cal OES. Refer to Guideline 13 on Page 3 for interoperability channel reservation requests.**

NOTE: For additional information concerning the appropriate usage of channels identified in the FIRESCOPE STATEWIDE CHANNEL PLAN, contact OES Telecommunications or your respective Communications Unit Leader (COML)

<p>The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.</p>
